FEEDING DIRECTIONS

Feed at 7 oz/hd/day. Do not feed undiluted. Mix in a complete feed at a rate of 7.5 to 59.7 pounds per ton for the resulting mix to provide between 50-480 mg of Monensin per head daily. When using the 7.5 pounds per ton rate, feed the resulting mix at 20#/hd/day to provide 50mg/hd/day. When using the 59.7 pounds per ton rate, feed the resulting mix at 24#/hd/day to provide 480mg/hd/day. Provide clean, fresh water at all times.

CAUTION: Do not allow horses or other equines access to formulations containing Monensin. Ingestion of Monensin by equines has been fatal. Feeding undiluted or mixing errors resulting in high concentrations of Monensin could be fatal to cattle. Must be thoroughly mixed in feeds before use; do not feed undiluted.

WARNING: A withdrawal time has not been established for pre-ruminating calves. Do not use in calves to be processed for veal.
